🧾 Final Year Project (FYP) – Locked Summary

📌 Project Title:

DeepFocus+ — The Smart, Self-Adaptive Study & Focus Planner

🎯 Problem Statement:

Many final-year students, especially those who've struggled throughout their degree, find themselves lost, panicked, and unable to start or complete their preparation for jobs, scholarships, or further studies. Despite the will to act, they lack a proper system, a smart guide, and clear direction.

They don't know what to prioritise, how to pace themselves, or how to recover academically when time is short. Even powerful tools like ChatGPT are hard to use without deep effort, context building, or premium features.

DeepFocus+ solves this by providing a simple, minimal, AI-guided smart planner that helps such students get back on track — step-by-step — using a hybrid offline+online tool with zero overwhelm.

👤 Target User:

- Final-year university students who:
  - Haven't prepared for jobs/scholarships
  - Have low confidence in planning
  - Need motivation and structure
  - Want to recover fast before graduation

✅ Core Features (Must-Have):

1. ✅ Smart Weekly Planner (auto adjusts task weights)
2. ✅ Adaptive Study Load (based on focus or mood)
3. ✅ Motivation Nudges (quotes, mental reset prompts)
4. ✅ PDF Export of logs for CV/scholarship use
5. ✅ Minimal, focused UI (no clutter)

6. ✅ Distraction Warnings (focus check-ins)
7. ✅ No signup/login required for core use
8. ✅ Fully works offline with local data saving
9. ✅ Optional cloud sync for future upgrades

□ Technology Stack (Finalised):

Layer	Tech Used
Frontend	HTML, Tailwind CSS, JavaScript
Framework	React.js *(or Vanilla JS MVP)*
Backend	Python Flask *(upgrade: Django)*
Database	LocalStorage → SQLite/Firebase
PDF Export	jsPDF or Flask + ReportLab
Auth (Optional)	Firebase Auth or Django AllAuth
AI Logic	Optional OpenAI API (later stage)

🔁 Mode of Operation:

Hybrid

- ✅ Fully offline support
- ✅ Optional cloud sync later
- ✅ Designed for low-pressure, low-tech environments

🖼 Wireframe (V1 Locked)

✅ Includes:

- Weekly Planner
- Task Cards
- Motivation Nudges
- Export Button
- Distraction Checker
- Minimal layout (sidebar + main panel only)
  (*Image already shared and locked*)

🛠 Roadmap / Timeline (Jul – Nov)

✅ Stage 0 – Planning (Locked)

- ☑ Problem, features, sketch, tech, user case locked

🚀 Stage 1 – UI Design & Layout (Jul 29 – Aug 10)

- Static homepage
- Planner layout (HTML/Tailwind)
- Task card components
- Quote/nudge panel
- Responsive grid

🔄 Stage 2 – Core Logic (Aug 11 – 25)

- Add/Edit/Delete tasks (LocalStorage)
- Auto task weight system
- Weekly planner functionality
- Distraction check-ins
- PDF export of logs

🌐 Stage 3 – Cloud Sync (Sept)

- Firebase Auth + DB (optional)
- Sync study logs across devices

🧠 Stage 4 – Smart System (Sept–Oct)

- Adaptive planner suggestions
- Motivational engine (rules-based)
- Chat-style mini guide (future AI)

🎁 Final Deliverables (Oct – Nov)

- Working hybrid web app
- GitHub project + README
- Demo video (optional)
- FYP Report (will assist you)
- PDF planner samples

📖 About This Project – *DeepFocus+*

“Yes. You can. Look — I did.”

This project was born from a real student’s struggle — mine.
For years, I believed it was too late. I thought I had missed every opportunity: to apply for scholarships, build a strong CV, or even stay consistent with study plans. I tried and failed many times — not because I lacked ability, but because I lacked direction, clarity, and support.

DeepFocus+ is the solution I wish existed back then.
It’s a self-adaptive, smart planner built **for students like me** — the ones who wake up in their final year and realize they want to turn everything around but don’t know where to start.

This isn’t just a tool. It’s a second chance —
A structured way forward when everything feels chaotic. And
proof that it’s *not too late*.

“Yes. You can. Look — I did.”

📌 *Mini Version for App UI / Homepage*

DeepFocus+
Made by a student who thought it was too late — Until
she proved it wasn’t.

“Yes. You can. Look — I did.”

📌 *Problem Statement + Real World Motivation*

Problem 1:
After spending 3 years of university without clarity, many students feel lost. They think they’ve learned nothing useful. They believe they can’t build a Final Year Project or apply for scholarships or higher education — especially abroad.

Solution:
My web app will start by encouraging students with motivational quotes and relatable messages — reminding them they *can* turn things around, just like I did. This becomes the first push to act.

Problem 2:
Even after motivation, students don’t know *how* to move forward. Hiring a consultant is

expensive, and without proper guidance, students feel stuck — especially those planning to study abroad.

Solution:
My web app will give them the exact **direction** they need. It will ask about their goals, timeline, and background, then create a **structured plan** based on that. I created my path using ChatGPT after thousands of prompts — the app will automate that effort for every student.

Problem 3:
Many students try to create roadmaps or study plans but fail to follow them. Their daily routine collapses, and they feel guilty or confused.

Solution:
The app will give them **personalised daily tasks**, adjusted automatically using AI. It will keep their routine manageable, realistic, and achievable — even when they skip or delay some tasks.

Problem 4:
Students think they *can't stick* to any timetable. Like me, they were never trained to follow structured plans — so they feel intimidated or disconnected from rigid routines.

Solution:
My web app will build **adaptive schedules** that match the student's pace, energy, and interests. It won't force — it will suggest. That way, the student feels understood and in control.

Problem 5:
Students say they can't stay focused for long. They try, but distractions win. Even when motivated, they lose hours without realising it.

Solution:
The app will offer **distraction alerts**, weekly **focus graphs**, and gentle nudges when productivity drops. These help students *train their brain* over time and feel proud of small wins.

Problem 6:
Students often wish their friends could join them — work on goals together, track each other's progress, or just feel less alone. But they don't know how to share their process or invite others in.

Solution:
The app will provide **PDF progress reports** and **collaborative features** — so students can share what they're doing with friends. It will allow **team goal tracking** or **project-based syncing** — so students can build their future *together*.
